

LENGTH OF STRING

Aim

To find the length of a given string using RAPTOR.

Algorithm

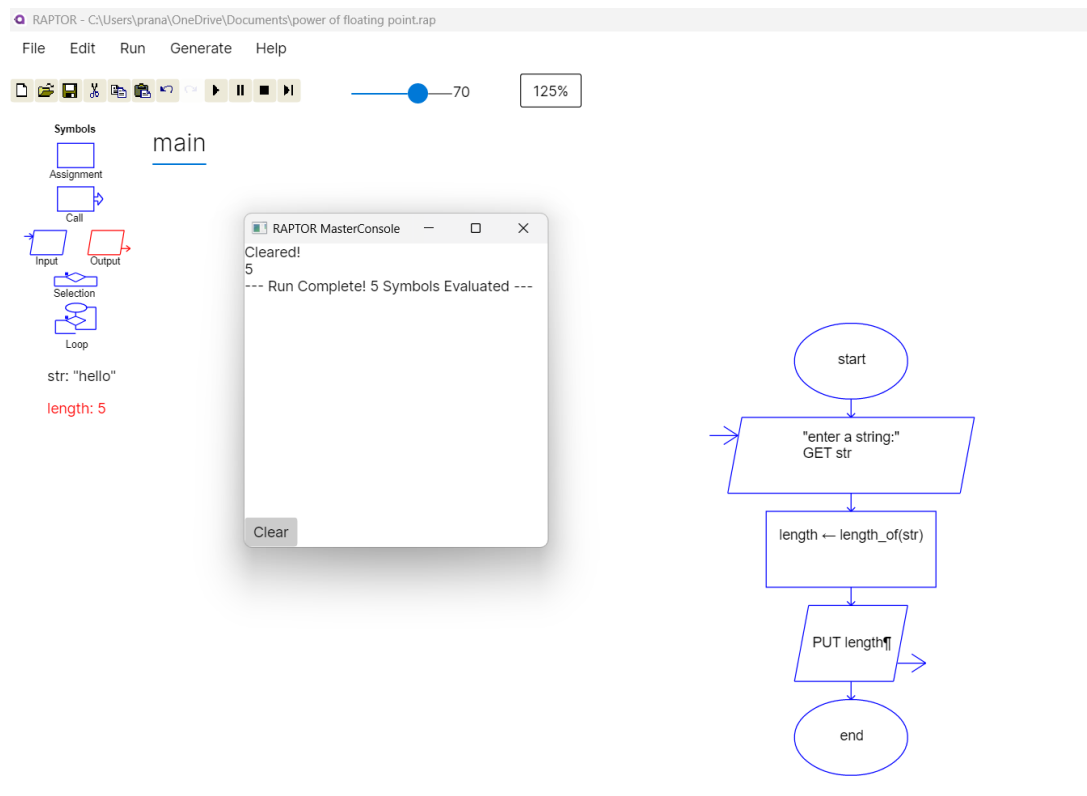

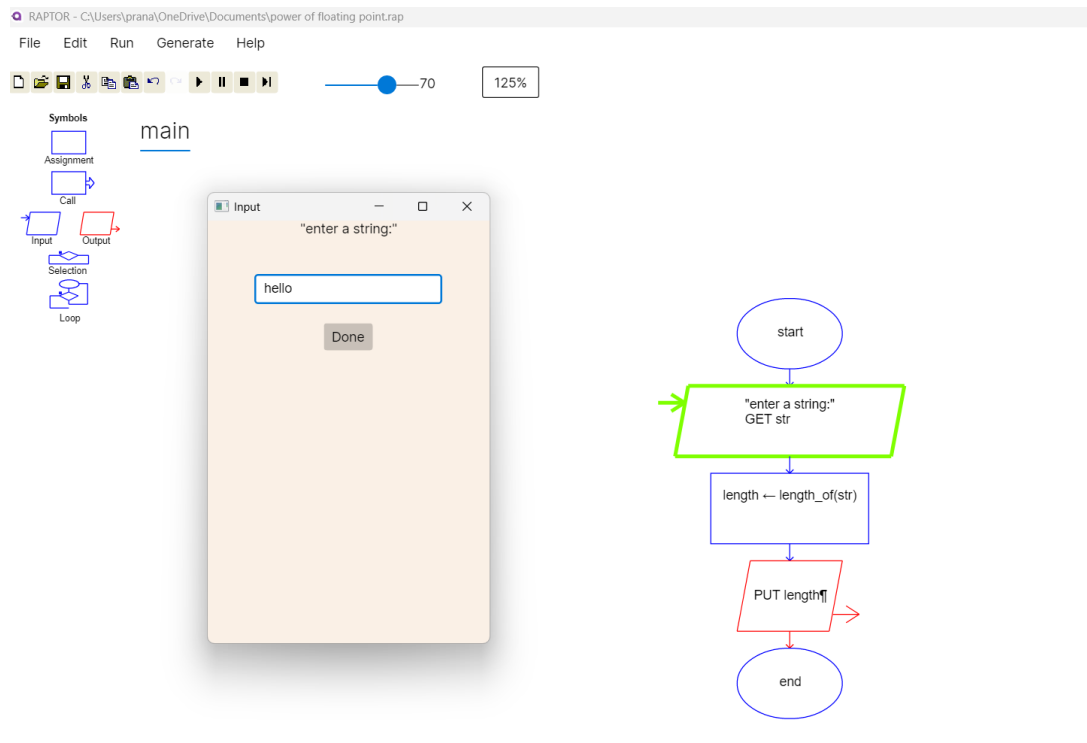

1. Start.
2. Read the input string str.
3. Calculate $\text{length} = \text{length_of}(\text{str})$.
4. Display the value of length.
5. Stop.

Sample Input

str = "hello"

Sample Output

Length = 5

Result

The length of the given string was calculated successfully using RAPTOR.
